Sennheiser Tourguide 2020D

A Tourguide system is often also referred to as a whisper system. The general idea behind a guided tour and a translation system is basically the same. One person speaks and the others listen with the utmost of attention. Just like at home. Even for longer periods. 99% of all rental is being covered with our Sennheiser Tourguide 2020D systems, which are the best in the world in this particular field. No other system comes even close when it comes to audio quality and wireless transmission. After all Sennheiser has a very long field of expertise. See image on the right.

Features

- 6 modulation free channels in tourguide mode
- 8 modulation free channels in stationary mode
- Handheld and headworn microphones
- Stethoset receiver and receiver + headphonecombi
- Very sturdy housing
- Sturdy software environment
- Very low fault percentage overall
- Ergonomic design for optimal comfort
- Perfect wireless connection

One of the first Sennheiser Tourguide systems ever. They've got tons of experience and this advantage is something you can hear clearly in the latest products

Audioguides

Our audioguides are not the most fancy looking devices. Which is great in our believe. All attention should go to the stuff on display and not to the equipment. Also they are very very easy to handle. Just connect one or two headphones per device or just use the high quality speaker of the audioguide and you are good to go!

- Very easy to use
- Non distracting design
- Two headphone sockets
- Quality built-in loudspeaker
- Informative OLED display
- IR and Rfid activation possible
- Easy to programm
- Available in budget version

Multimedia Guides

Multimedia guides combine audio and video to inform the visitors in the best way possible. Fancy looking Android based devices provide the visitors with information when they need it and when you want it as a venue owner.

To give you an idea of the matter it is important to know that the content needed for the devices can be produced by Orpheo. The content is being handled by an app which can also be provided in the Appstore or the Google Playstore. This way your visitors can download your content and enjoy their visit using their own devices.

Features

- Clear and bright screen
- Many formats possible
- Can be ultimately shaped to your needs
- Very easy to handle by the visitors
- GPS based for outdoor activities.

Sennheiser Tourguide EZL2020-20

The Sennheiser Tourguide EZL2020-20 is the base of the tourguidesystem. It is a carrying- and charging case that holds up to 20 receivers and 2 Sennheiser SK2020D transmitters and/or Sennheiser BA 2015 batteries. Because of its fast charging abilities it can fully recharge the system from empty to full in 2,5 - 3,5 hours. It has a very convenient copy button which allows you to set every receiver to the same settings at once.

Sennheiser SK2020-D bodypack transmitter with Sennheiser HS2-ew headworn microphone

This is the best and easiest way to conduct a tour or silently translate for your your guests. This microphone has the world famous MKE2 capsule and is positioned in a way that the highest speech intelligibility is for sure. By connecting this microphone to the very robust Sennheiser SK2020D transmitter your spoken word is transmitted without any form of distortion. Absolutely intermodulation free. As a bonus there is also a line in input available so you can connect an external device like an Orpheo audioguide.

Sennheiser SKM2020-D handheld transmitter

Expecting questions from your audience during your factory tour? No problem. Just use this very robust handheld transmitter and like an interviewer have the guests ask their questions into the mic so everybody can hear the question. Because the tourguide uses the same microphone the given answer is also audible for everybody.

Sennheiser HDE 2020-D stethoset receiver

This is the most used receiver for this tourguide system because of its high ease of use. Just open the earbuds and you are good to go. Only a channel selector and a volume wheel can be used to adjust the settings. The silicone earmuffs can easily be cleaned or replaced for higher hygienic comfort. The battery lasts up to eight hrs on a full charge. This is a long talk.

Sennheiser EK 2020-D bodypack receiver

Need a longer battery time? Or want even more hygienic comfort? Try the Sennheiser EK 2020D bodypack receiver. With a battery that lasts up to 16 hours and a headphone socket which allows for most headphones with a 3.5 mm connector to give perfect results this will be the perfect match for you. Instead of headphones one can also use personal induction loops (see insert) to assist the hearing

Sennheiser table top chargers

Sometimes you do not need a suitcase to protect your valuable Sennheiser Tourguide system. Sometimes 20 just does not meet your wishes. In these cases we can offer the Sennheiser L2020-10 table top charger that holds up to 10 Sennheiser Tourguide 2020D receivers. Just charging, no extras like a copy button. Up to 5 of these chargers can be cascaded. Need more than 20 positions? Try the Sennheiser L2021-40 table top charger that holds up to 40 Sennheiser Tourguide 2020D receivers and has a copy button. As well as networking ability. Windows only. Sorry.

Silicon replacement buds for your Sennheiser HDE2020 receiver. 5 pairs = 10 pcs..

Orpheo Mikro LX Audioguides

Most customers just wanna press the button (a number) and have the audioguides play the corresponding track. But if you want everything to go automatically, that is fine also. These Orpheo MikroLX audioguides can be triggered by infra red or RFid. Video sync is also possible. Thanks to it's non distractive design and it's high flexibility when it comes to programming it is a great partner for many locations.

www.guidexpresse.com

The core business of GuideXpresse is the rental and sale of tour- and audioguide systems. Tourguide systems can be used either for live-tourguide situations or live- translations. Basic idea is you have one speaker and a number of listeners which is only limited to the reach of the system in distance. Audioguides speak for themselves. Well, you first have to put in a digit, but after that it just works. And yes, of course the audiofiles can be triggered automatically also. No sweat. But only if you really want it.
